Pharmacy Shelving in general

Pharmacological knowledge was already recorded in the ancient Egyptian (16th century BC) by Edwin Smith Papyrus. The great knowledge about the power of botany was carried over generations. At this time the Fareast and Middle East have been far ahead with their pharmacological understanding. The progress made in the Middle East in botany, chemistry and techniques as sublimation and distillation led medicine in medieval Islam (856-1013 AD) substantially to develop pharmacology.

In the 9th century, the first pharmacies were state-regulated. This was the first step into public regulatory. In the meantime everything became a lot more complex and professional. Nowadays sophisticated substances and costly chemical compounds fill the shelves of pharmacies, helping people to cure their diseases. Since drug processing is costly and zero error is tolerated, not only the production needs to be controlled also transportation and storage is crucial to ensure the product quality.

Facts & figures:

In the U.S. increased there drug consumption from $144 per person in 1960 to almost $4,400 by 1999. By 2008 it the US citizen spent $7,500 per person.

The general aging of the population is leading to higher drug consumption. By 2020, 28% of the US population will be older than 65.

Growing World Wide Healthcare Spending Per Person

A medicament is a special product. If it isn’t treated with caution our health is affected by soon. Light, temperature and humidity are affecting the quality and purity of the drug which can lead to no effect or at worst may even harm our health.

Possible negative effects:

- **Heat**: Essential oils (e.g. from Camille) or alcohol-containing substances (e.g. cough drops) can evaporate if they are exposed to higher temperature.
- **Humidity**: If tees or powders are exposed to the humidity they can be affected by mildew. Tablets can turn gray or begin to decompose.
- **Cold**: The so-called substrate of drugs as lactose in tablets can harden.

How to ensure the right climate distribution?

The best way to check the overall a room parameters is to carry out a mapping. A mapping is done by placing datalogger for (°C, %rh, light) in various strategic places in a room, that are accurately monitoring the different parameters. Depending on the room topology hot and cold spots will occur. Mapping gives a detailed picture of the overall room homogeneity over a certain period of time for temperature and/or humidity. More details about °C & % rh mapping can be found in our Application Note F005.
What solutions can Rotronic offer?

Rotronic offers a wide range of products either for monitoring a pharmacy shelves or making your mapping successful.

The range starts from small standalone loggers as HL20 to Universal loggers which is capable to measure beside °C & %rh also light, G-force and analogue input information signals. The HL-NT series and the wireless logger LOG-HC2-RC are network based products. With their network ability they are able to communicate via various ways as RS485, USB, LAN or Wireless which allows to monitor remote places anywhere in the room. The validated HW4 software makes it easy to analyze the data or export the data into Excel for reporting and further processing as requested by FDA 21 CFR Part 11 regulations.

Rotronic products:

Dataloggers:

- **Universal Logger**
  Two interchangeable probes, Display and USB interface, 2million measurement parameters for: °C / % rh / light / G-Force / pressure / Analog In / Outputs Display available...

- **Wireless Logger**
  Based on 433/915MHz 500'000 measured values for (SN, Hour/Date, Temp. % rh) 6 years battery lifetime, up to 100m communication range.

  Additional Options:
  LOG-DS-EX: Receiver with USB interface
  LOG-PT1000: Logger for temperature only

- **HL-NT logger**
  For interchangeable probes (up to 7 probes with docking station) 32MB flash card, Display, Conform to FDA21 CFR Part 11 and GAMP4...

- **HL-21D logger**
  ±0.2 °C accuracy FDA 21 CFR Part 11 / GAMP 4 Adjustable log interval Memory: 20000 data records

- **HL-20D logger**
  0..100%rh, ±0.8 %rh / ±0.2 °C FDA 21 CFR Part 11 / GAMP 4 Adjustable log interval Memory: 20000 data records

Probes:

- **HC2-S**
  Standard humidity sensor -50...+100°C, 0...100%rh, ±0.8%rh and ±0.1K...

- **HC2-xx**
  Basically any type of rotronic probe can be used with the UART interface to match almost every possible application.

Customer benefits:

Rotronic loggers:

The accurate long term recording of mainly humidity and temperature is very important for distribution, storage or mapping applications.

**The HL-21D & HL-20D Data loggers:** The battery powered data logger is designed to be replaced at any location where cabling or external power supply is not an option.

**The HL-NT logger:** Offers the widest range of possibilities. All loggers can directly be connected with the rotronic HW4 software over LAN, WLAN, USB or RS485. Each logger is capable to handle up to seven probes.

The **LOG-HC2-xx Universal logger** is not only a simple logger, it offers more! This independent battery powered device measures parallel 6 parameters such as Light(Lux), G-force in 3-axes, analogue input, air pressure, temperature and humidity. The large memory of 2’000’000 measurement values and the USB interface does make it a perfect tool for monitoring and or mapping for a pharmacy environment.

The **LOG-HC2-RC Wireless Logger:** The outstanding energy-saving technology enables a battery lifetime of up to 6 years. Which makes it optimal tool for sites without infrastructure where precision and high storage is requested.
Contact us:

Rotronic is represented in more than 40 countries around the world. An up to date list of all our partners is available at www.rotronic-humidity.com/international
